

NGUYEN HUY QUANG

Data Analyst

☎ 0854624879 | ✉ nguyenhuyquangvt@gmail.com | [in linkedin.com/in/zennn](https://www.linkedin.com/in/zennn) | 📍 Go Vap, Ho Chi Minh

EDUCATION

VNUHCM - University Of Science

Dec. 2023 – Oct. 2026

Master of Data Science

GPA: 8.5/10

VNUHCM - University Of Science

Sep. 2020 – Oct. 2023

Bachelor of Mathematics and Computer Science

GPA: 8.04/10 (3.42/4.0)

- **Specialization:** Statistics & Probability

CERTIFICATIONS

- **English:** VSTEP (B1)
- **DataCamp - Statistics Fundamentals with R**
- **DataCamp - Data Analyst with R**
- **Coursera - Google Data Analytics**

SKILLS

- **Programming Languages:** Python (Pandas, Numpy).
- **Database Management:** SQL Server.
- **Data Visualization Tools:** Microsoft Power BI (Data Modeling, DAX), Excel.
- **Statistical Analysis:** Inferential Statistics (Hypothesis Testing), Regression Analysis, Exploratory Data Analysis (EDA).

WORK EXPERIENCE

AI Engineer - Penguin Secret Agency

Oct 2025 – Dec 2025

- Designed and developed an AI agent to handle product-related queries such as pricing, inventory levels, sales counts, and product descriptions using structured data stored in PostgreSQL.
- Built a FastAPI backend integrated with LangChain to orchestrate agent workflows and enable tool-based database retrieval.
- Used the LLM only for response synthesis to generate clear, natural language answers based strictly on verified data, ensuring high accuracy and minimizing hallucination.
- Implemented an intent-driven query pipeline that identifies user needs (price, stock, product details) and triggers corresponding database functions for real-time data access.

Data Analyst Intern - PetroVietnam Ca Mau Fertilizer JSC

Oct 2024 – Mar 2025

- Designed and implemented data models (star schema) to support analytics across finance, sales, inventory, production, and receivables/payables.
- Built and optimized data pipelines using Python (Pandas) and SQL, processing 100K+ monthly records with high accuracy.
- Developed Power BI dashboards to monitor KPIs, enabling data-driven decision-making across business functions.
- Conducted Exploratory Data Analysis (EDA) on sales, inventory, and distribution data, identified slow-moving stock and operational bottlenecks.

Teaching Assistant - VNUHCM - University Of Science

Oct 2024 – Jan 2025

- Delivered lab sessions for Data Visualization using Power BI; mentored students on ETL and data modeling.
- Supported dashboard development, visualization design, and troubleshooting DAX and reporting issues.

PROJECTS

ETL Sales Data Analysis | Python (NumPy, Pandas, Scikit-learn, Matplotlib), Power BI

- Built end-to-end ETL pipeline using Python and Power BI, processing 9K+ Excel records with cleaning, transformation (Pandas, NumPy), and Exploratory Data Analysis - EDA (Seaborn, Matplotlib).
- Created interactive Power BI dashboards tracking \$2.3M+ sales and \$286K profit across products, regions, customer segments, and shipping modes.
- Analyzed regional and product profitability (West 31% of sales; Technology highest profit, Furniture lower margins), identifying gaps.
- Assessed discount and shipping impacts on margins; flagged negative profits above 20% discount and provided actionable pricing/logistics insights.
